PREFACE

As in every field, innovation is happening at a dizzying pace in the field of health sciences. During this rapid and impressive progress, change, and differentiation, the need for increasing interaction, communication, and coordination among health science disciplines arises every day.

With this book, we have tried to express the current innovations, developments, interactions, and differentiations of many disciplines closely related to health sciences, such as medicine, nursing, pharmacy, and agriculture.

With the hope that this book, which compiles some developments from different disciplines in the field of health within the precise development winds of the twenty-first century where artificial intelligence is on the agenda, will be beneficial for the scientific world and humanity...
