Preface

The book titled “Countries’ Mathematics Curricula and Approaches” , which we prepared in both Turkish and English, will provide academics, educators, curriculum developers, undergraduate and graduate students with an overview of mathematics education in various countries in different continents of the world. It is a resource book that provides up-to-date and in-depth information on the place of countries in international exams in mathematics education, mathematics curricula (pre-school, primary, secondary, high school), methods and approaches used in mathematics teaching and measurement and evaluation.

This book has been prepared with the contributions of very valuable professors working in the field of mathematics education in various universities in Türkiye and abroad. In this context, care has been taken to ensure that the relevant sections of the book are written by educators and scientists who have been in those countries before or who have worked on the education programs of those countries. With the contribution of these foreign academics to the book, it is thought that the mathematics education of the countries is transferred directly and more effectively.
